

## Radiodetection and Juniper Systems High-Accuracy Underground Utility Locate Mapping Solution

### How it Works

By launching the Pointman Locate App on an Android mobile device, users can connect an RD8100 locator and a high-accuracy Geode GPS receiver by Juniper Systems to the device via Bluetooth. Once connected, users select the asset type and begin locating as normal. With each button press on the RD8100, locate stats (e.g. depth and frequency) and GPS position are saved. Upon completion, users can email common map file formats (e.g. Google Earth, .shp, .csv) to their customers, or save to Dropbox, Google Drive, etc. Package components are listed below.

**1** 7" Android Tablet

**2** Geode Sub-meter  
GPS Receiver

**3** ProStar's PointMan®  
Software

**4** All accessories  
needed for both pole  
mount and hands-  
free carrying

**5** 1 year software  
support, and 1 year  
tablet warranty
